**Ecosystem Health**

The ENST concentration in **Ecosystem Health** gives students the concepts and skills to work in this broad and increasingly important field with wide ranging applications in the environmental science and public health fields. The field encompasses environmental factors and ecosystem functions that affect human health and the effects of human activities on the ecosystem products and services we depend on. Example topics within the field include ecological risk analysis, environmental toxicology, environmental impact assessment, chemical fate and transport, human health risk assessment, industrial hygiene, air quality, environmental microbiology, food safety and security, and biodiversity and human health.

**ENST Core**  (44 credits)

Students must maintain an overall GPA of 2.0 and a grade of C- or better for all ENST required classes.

Courses not selected here may count as technical electives on the back, but cannot be counted as both an elective and as a concentration CORE/DEPTH course.
Any combination of electives can be taken. Courses appear in blocks of related topics to assist students in tailoring their program to particular interests with Ecosystem Health. Under some circumstances, other 300 or 400 level electives can be substituted with advisor's approval.
